The entry list of all three of them, will probably be unusu-ally large, so that doesn't look much like any monopoly. There are no trusts in the ama-teur athletic business. The demand all along has been for more athletics. Of course it would not be for the best interest of the sport to, as a general thing, "bunch" the more important meets. We will have a taste of seen what success will attend them. But on a holiday there are certainly enough successful, especially when they are so wide apart as Manhattan Field, Bergen Point and Staten Island. WEBSTER ON RAILROADS.

The Great Lawyer Took an Adverse View of Their Future.

In the year 1840 the locomotive was a small, weak machine that was employed to drag a few coach-like cars at a speed of about ten miles an hour. Then the directors and stockholders of railroads constituted the meekest class of citizens, very different from the dictatorial, influential class of the present.

Daniel Webster, in describing the American railroad of that time, said

American railroad of that time, said:

"They are made of two stringers of acantling, notched into ties that often get loose in the ground. Upon the stringers two straps of iron, the width and thickness of wagon-tires, are nailed.

"These straps of iron frequently get detached at the ends, which turn up like anales' heads and pierce the floors of the cars." Such an accident actually happened to a car between Elizabeth and New York.

"Then." said Webster, according to Youth's Companien, "the wheels slip on the iron straps, in Winter especially, so much that no dependence can be placed upon the time of arrival, and many people think that it is not certain that railroads will be a success."
